AMULET RESPONSE

Developed by Responders, for Responders

ACTIVATION AND NOTIFICATION

Amulet's easy to use interface allows responders to quickly activate and notify the appropriate response teams within your organization.

The activation screens prompts responders to include pertinent information including their location, incident details, and any images from the scene.

Configurable event types allow specific groups to be activated according to the event. The app can be configured to send notifications via text, email, and noisy push alerts.

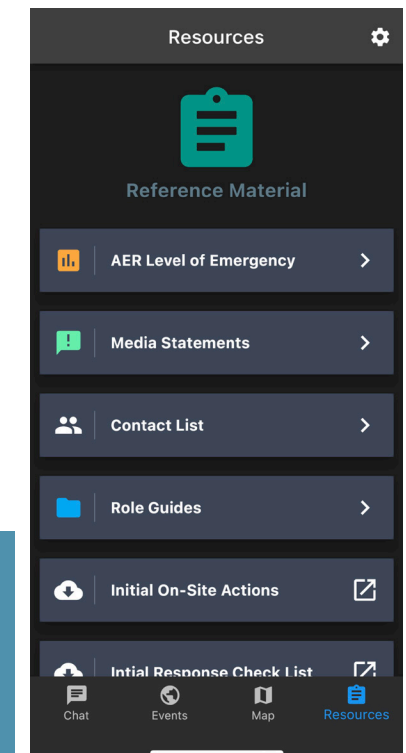

RAPID INFORMATION EXCHANGE

Once teams have been notified, Amulet allows users to see in real time who has accepted the call to action and can bring the team together to respond.

Responder location can be identified on notification to allow enhanced dispatch and situational awareness.

Secure messaging enables responders and command personnel to manage information effectively and securely send incident photos and documents. Communication history can be rapidly exported for Invoicing, Post Incident Reporting, Legal and regulatory follow up.

RESPONDER RESOURCES

You can select what resources your responders will find most relevant for use in the app. Sandhurst has a team that can work with you to design custom resources that will provide value during an emergency.

The app allows resources to be configured for different response groups and the app can be updated in real time with no user interaction required.

Resources can include media statements, assessment tools, external contact lists, role guide, initial actions, and hazard-specific response procedures.
